

Energibrønner og energisystemer i Bergensområdet

Kirsti Midttømme, NORCE

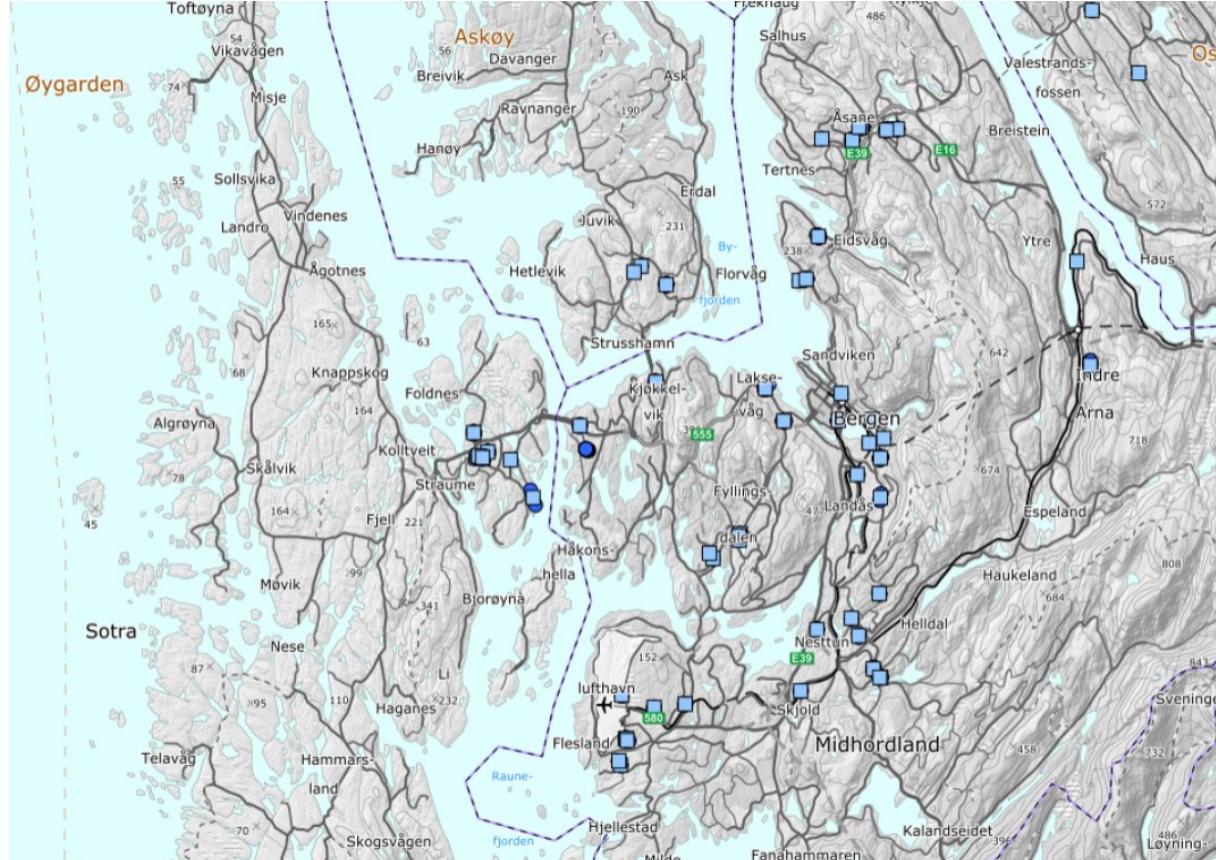

16. FEBRUAR 2023

Registrerte energibrønner i Bergen kommune

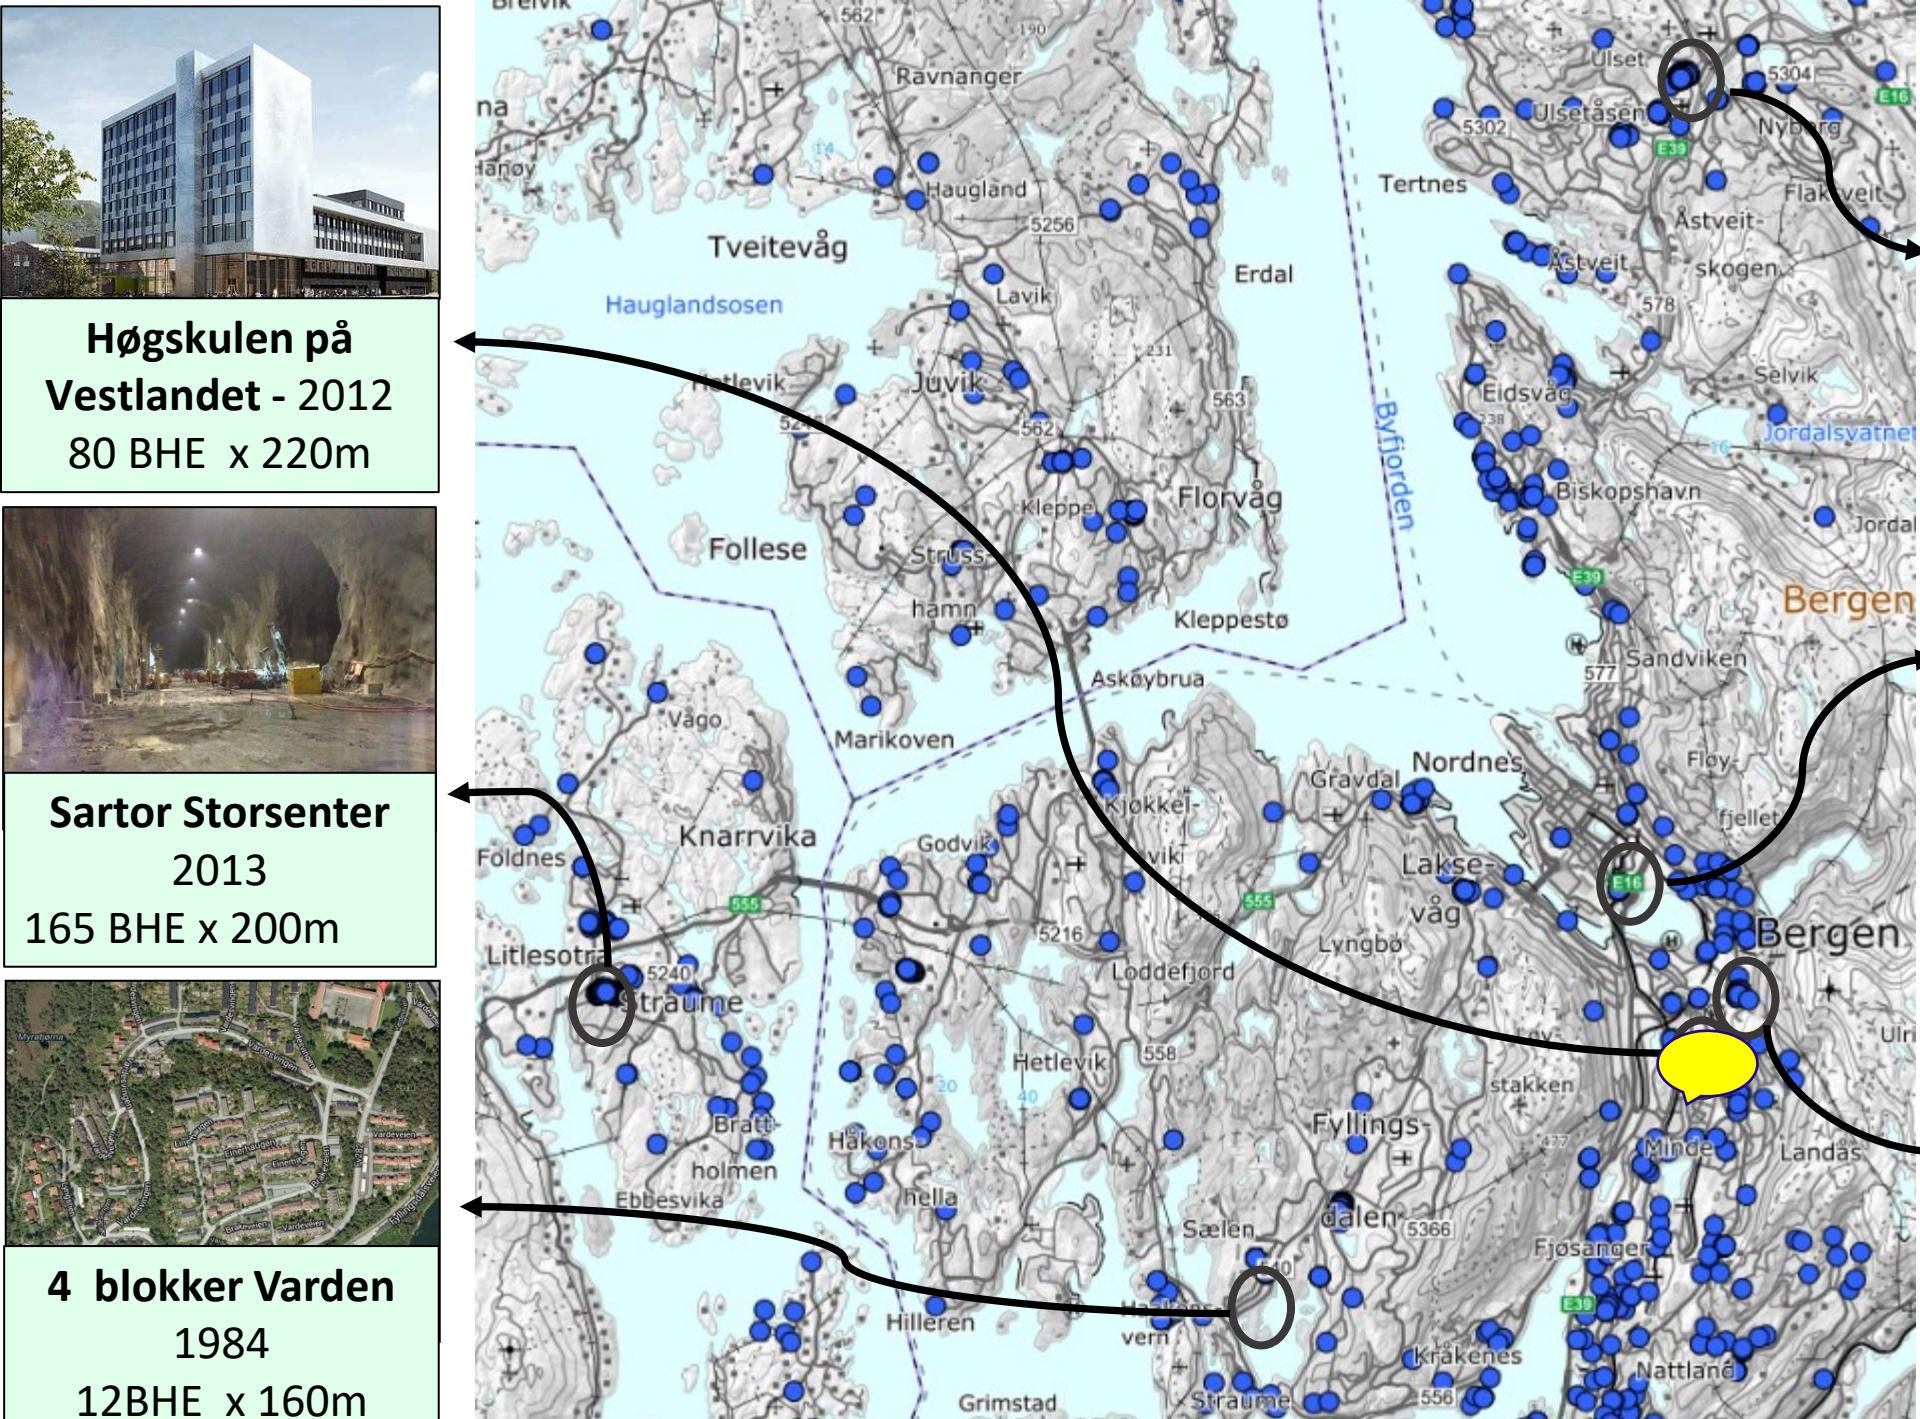

Pr 14 feb 2023

- 57 større bergvarmeanlegg (3%)
- 539 brønner i mindre anlegg (<1%)
- 866 brønner i større anlegg
- 133,5 km borelengde totalt
- 8 store anlegg i 2022
- Over 5 % av Norges befolkning bor i Bergen

Brønnparker i Bergen, Grunnvannsdatabasen

**Høgskulen på
Vestlandet - 2012**
80 BHE x 220m

Sartor Storsenter
2013
165 BHE x 200m

4 blokker Varden
1984
12BHE x 160m

Horisont Åsane -2013
112 BHE x 212m

Nygårdsposten -2015
55 BHE x 300m

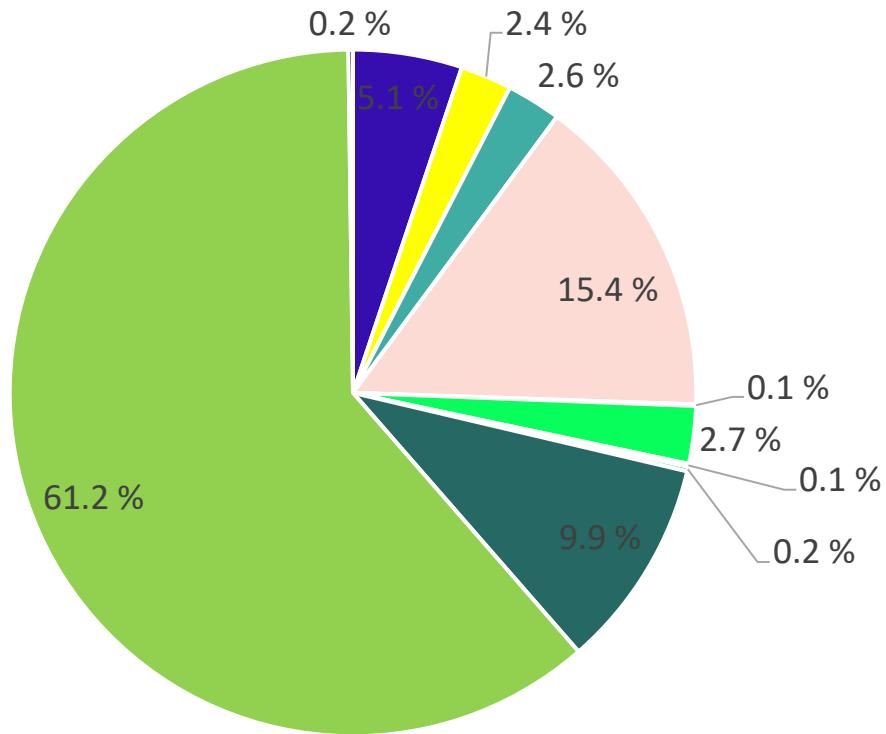

Haukeland sykehus -2013
Barne og ungdomsavd.
77 BHE x 250m

Energibrønner pr år

NORCE

- Brønn & Spesialboring a/s
- Fundamentering as
- Holt Risa AS, avd. Brønnboring
- Vestnorsk Brunnboring as

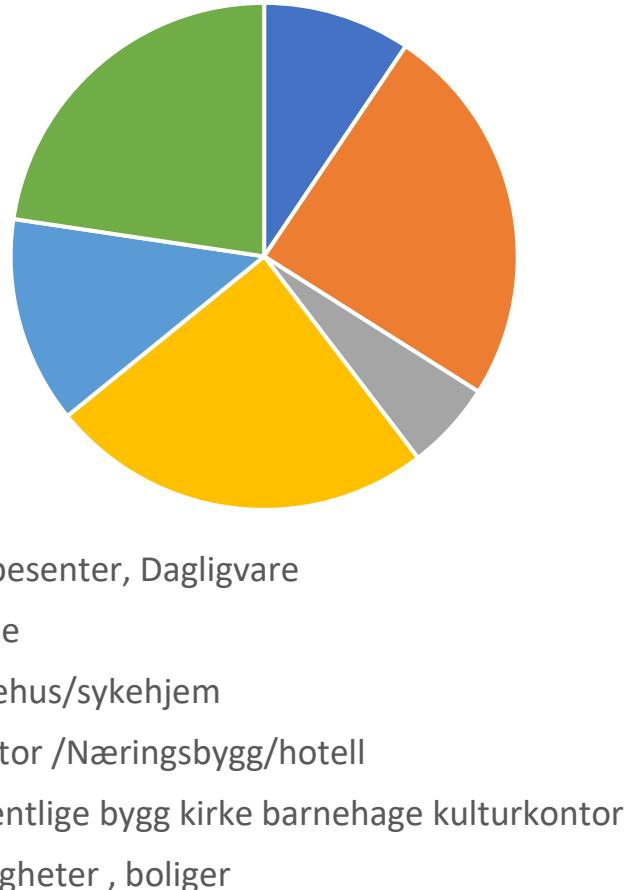

- Båsum Boring Trøndelag
- GEOTECH AS
- Sartor Maskin AS
- Voss Brønn og Energi

- Fetveit Brønnboring as
- Hallingdal Brønn og Graveservice as
- Sør-Norsk Boring as

Store brønnparker

Anlegg	Antall brønner	Total borelengde	År
Coop Åsane	114	23874	2013
Haukeland sykehus barne avd	77	18730	2012
Høgskolen i Bergen	80	16000	2012
Nygårdsposten	48	14100	2015
Liatun borettslag	34	10030	2019
Scandic Flesland airport	50	10000	2016
Åsane sykehjem	18	6720	2021
Gartnermarken Omsorgpluss	23	4931	2014
Eidsvåg skole	22	4400	2022
Alvøen skole	19	4050	2019
Ukjent B.Fondenes	17	3400	2014
Sweco Norge Fantoft.	15	3300	2014
Sparkjøp, Kokstad	18	3030	2010
HVL, Kronstad nybygg	14	3000	2020
Ulmåg skole	15	2811	2014
Ådnamarka skole	14	2800	2009
Solberget, leiligheter	13	2600	2017
Damsgårds skole	13	2600	2017
Shell /7-Eleven			
Nattlandsveien	11	2200	2012
NHH Handelshøgskolen	10	2000	2020
Nattland skole	10	2000	2016
Drotningsvik senter	10	2000	2012

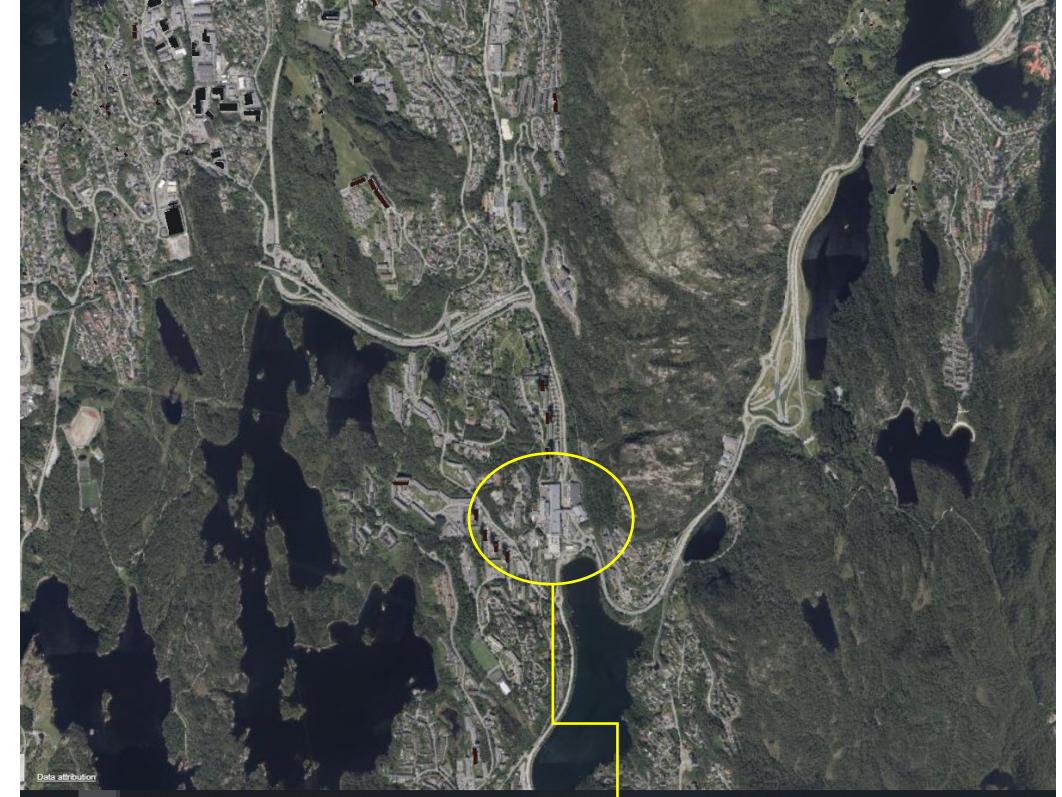

Egnethet for bergvarme i Bergen ?

Geologi

- Generelt lite med løsmasser
- Områder med mye grunnvann og utfordringer med boring
- Områder med høye radonverdier i grunnvann og høy radioaktivitet
- Hardt fjell, stor boreslitasje ?? Bores grunnere brønner på Vestlandet enn på Østlandet

Klima

- Blant regioner med varmest klima i Norge
 - Høy grunnvannstemperatur (8-10°C)
 - Mindre oppvarningsbehov, luft til luft fungerer bra store deler av året

Vestkanten Storsenter

Største utfordring

- Kontroll på drift av anleggene

Tekniske rom HVL Kronstad,

HECTAPUS

HEating Cooling Transition and Acceleration with Phase change energy Utilization Storage

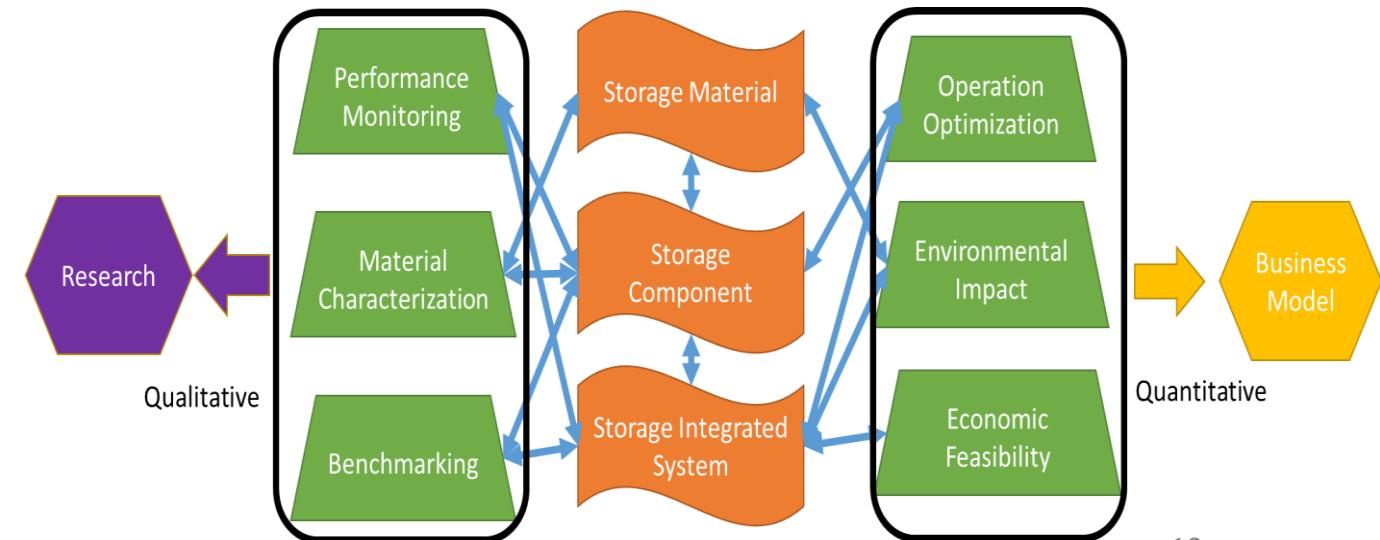

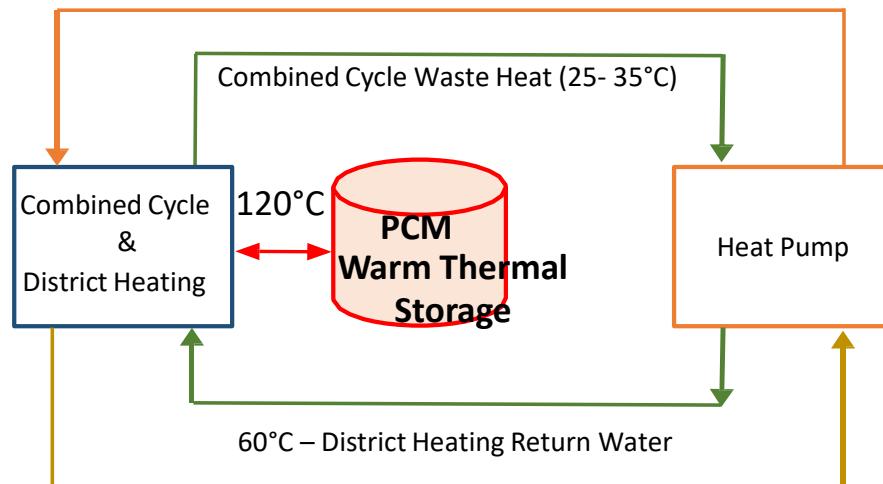

Are energy storage systems performing as they should be?

- Monitoring and performance evaluation of existing projects.

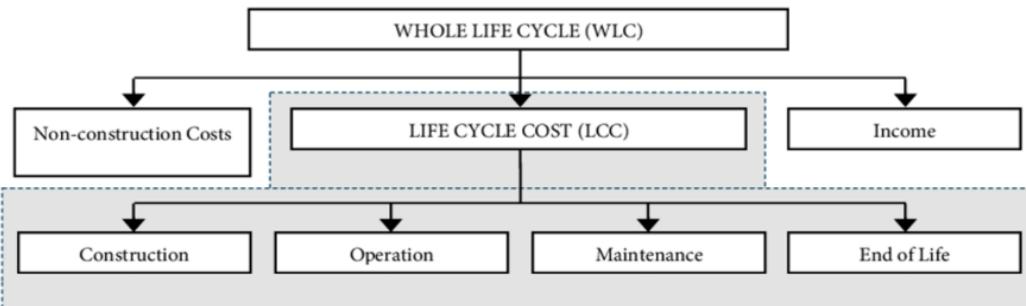

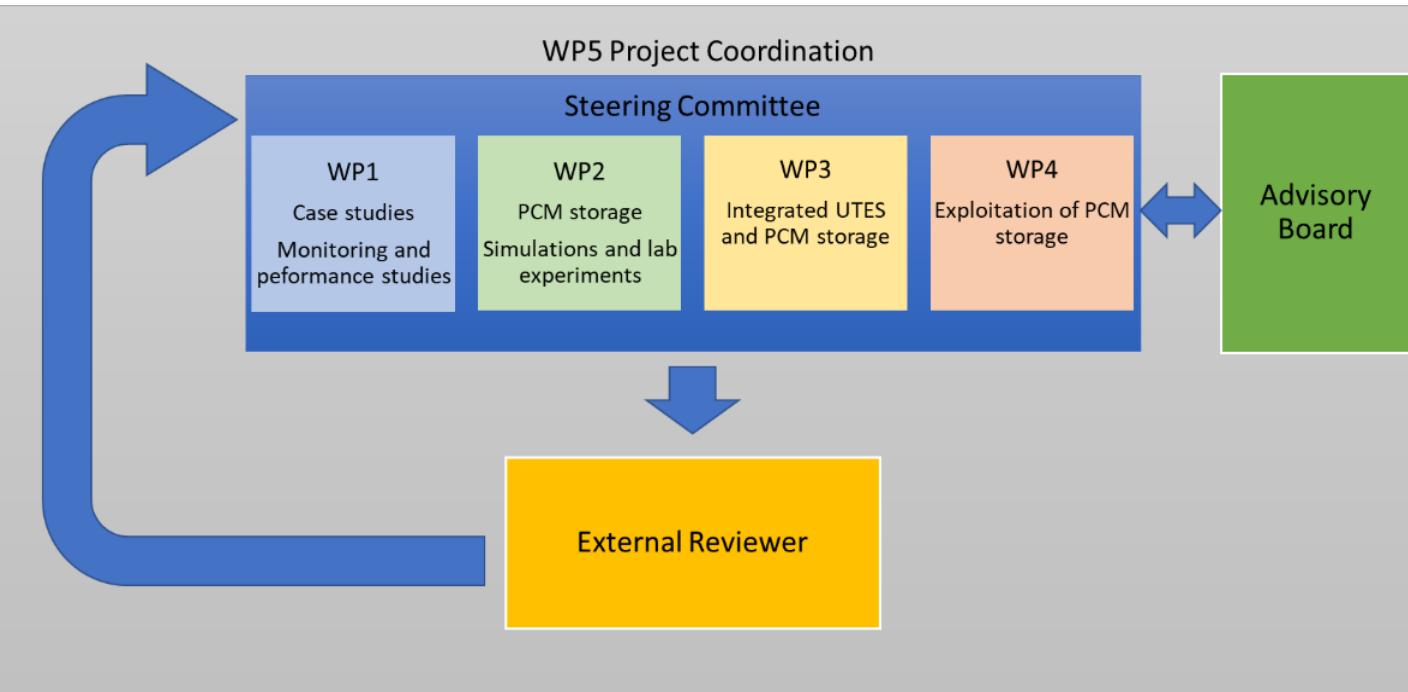

Challenges: Energy Storage on Heating/Cooling Transition

- Integration of energy storage in heating/cooling systems is scarcely monitored and benchmarked
- Impact on stakeholders for sector coupling and load management
- Full range of expertise is needed for performance evaluation: Material, Component and System
- Perform real case monitoring, evaluation and new business model creation

Solutions: Monitoring, Evaluation, Benchmarking and Exploitation of New Business Solutions

Monitoring Sites

Installation	Owner	Use	PCM storage	Capacity	Other energy sources	Year Constructed
				kWh		
Bergen Airport, Norway	Avinor	Heating/ Cooling	Tanks of flat ice elements of salt hydrate	11000	District Heating	2017
Western Norway University, Norway	Statsbygg	Heating/ Cooling	Tanks of flat ice elements with salt hydrates	11200	Borehole TES / District Heating	2014
AWL Building, Sweden	Akademiska Hus	Cooling	Tank with salt hydrate	275	District Cooling	2019
Sigba Office & warehouse, Norway	Sigba	Cooling	Tanks of flat ice elements with paraffin	120	TBD	2018-2019
Shelter for refugee camps, Turkey	Cukurova / Northumbria Universities	Heating / Cooling	Paraffin tank for heating / coco oil tank for cooling	24	Solar Thermal Collectors	2021

Takk for oppmerksomheten
